

POSITION

- ✓ Restrain the calf in a corner to maintain head control.
- ✓ Place the head in a neutral position.

PLACEMENT

- ✓ Gently advance the tube. If there's resistance, pull it out and start again.
- ✓ Palpate the calf's neck. When the tube is in the correct position, you will feel two tube-like structures (trachea and esophagus).

REMEMBER

- ✓ It's important to feed slowly. It can take up to 3 minutes for the stomach to fill.
- ✓ Ensure the fluids are body temperature (38°C/100°F).
- ✓ Before pulling the tube, kink and pull in one swift motion to ensure no fluid is inhaled.
- ✓ To ensure pathogens are not introduced to the herd, use separate feeders for sick and healthy animals.
- ✓ Clean the equipment thoroughly.
